**Method for Calculating Fees**
SCDIS uses RRDtool to graphically represent the customer’s bandwidth and billing operations data on a monthly recurring basis. This billing activity requires the monitoring of COE data bandwidth utilization. The scope of this monitoring expressly prohibits capture, viewing or otherwise sharing data content unless required by law.

Bandwidth data is measured from the customer’s activated network interface port on SCDIS internet colocation gateway switch, and recorded in a log file every 1 minute. At the end of each month, the samples are sorted from highest to lowest, and the top 5% of bandwidth utilization data is discarded. The next highest measurement (95th percentile) becomes the billable utilization for the month.

These graphs will be made available on the customer’s colocation web service portal provided by SCDIS. (See example chart below:)
